Authors: Parry, C.; Quail, M.; Rutherford, K.; Simmonds, M.; Skelton, J.; Stevens, K.; Title: Complete genome sequence of a multiple drug resistant Salmonella enterica serov
                                                          Description: allows clpP to hydrolyze polypeptides and proteins, probably by a chaperd activity; ATP hydrolysis is required for Clp hydrolysis of proteins but not of smaller Superfamily: endopeptidase Clp ATP-binding chain chaperone; ATP; hydrolase; molecular chaperone; nucleotide binding; P-loop 207-214/Region: nucleotide-binding motif A (P-loop) 257-260/Region: nucleotide-binding motif B (04-611/Region: nucleotide-binding motif B (67-677/Region: nucleotide-binding motif B (7-loop)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Status: preliminary
Molecula type: DNA
Residues: 1-685 <PAR>

The hPSP DNA is useful for chromosome identification and isolation of the corresponding genomic DNA. The DNA and protein can be used to detect abnormal levels of hPSP (in standard blotting, mplication or immuno assays), particularly for diagnosis of digestive, non-limune defensive, endocrine or immune system disorders. A particular application is diagnosis of cancers of the salivary gland, thymus and pancreas which are associated with high levels of hPSP. The protein is also useful as antifungal, antiboacterial, antiparasitic and antiviral agents and may be expressed in vivo from the DNA. The protein, or cells carries, e.g. antiboacterial, antiparasities and antisense nucleic acids, which are potentially useful for treating conditions associated with excessive hPSP production. Cells containing the DNA are used to express the recombinant protein and this can be used to raise Ab, useful for diagnosis, therapy, for affinity purification and to identify hPSP-binding proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     secretory tissue; gastrointestinal tissue; HPSP, Sjorgen's syndrome; Graves disease; thyroiditis; insulin-dependent diabetes; pancrealitis; ulcerative colitis; Crohn's disease; atrophic gastritis.

This represents a human parotid secretory protein (HPSP). Antagonists that bind specifically to, and modulate activity of HPSP are used to treat cancer and autoimmune diseases particularly of secretory or gastrointestinal tissue, e.g. cancer of salivary gland, thyroid, of salivary gland, thyroid, castrointestinal tract or pancreas. Slorger's syndrome, of saves disease, thyroiditis, insulin-dependent diabetes, pancreatitis, ulcerative colitis, orbn's disease and atrophic gastriits. Host cells to roduce recombinant HPSP which is used to generate antibodies and to screen for its antagonists. Antibodies are useful directly as antagonists to monitor patients being treated with HPSP, and for purification of HPSP from natural sources. Expression of HPSP mad for purification of HPSP from natural sources. Expression of HPSP may indicate cell proliferation. HPSP nucleic acid or its fragments are used to detect these ending sequences (optionally after amplification by PCR) by hybridisation, particularly for diagnosis and monitoring of disease, but also for mapping the chromosomal sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human; tumour; diagnosis; neoplastic disease; neoplastic cell growth;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Roy MA;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 q
```

```
This sequence represents a human secreted protein amino acid sequence.
The invention relates to sequences AAAB7725-88774 which encode human secreted proteins AAB25763-B25812. The proteins include signal peptides.

Included in the invention are a host cell containing one of the cDNA sequences, and a purified antibody capable of binding to one of the secreted proteins. Also contained in the invention are methods for storing the sequence data on a computer system, and a method for claim from the sequence of the cDNAs sequences using a computer programme. The cDNAs are useful for expressing secreted proteins or fragments to obtain antibodies capable of specifically binding to the secreted proteins. The CDNAs may also be useful in diagnostic, forensic, gene proteins. The CDNAs may also be useful in diagnostic, forensic, gene cherapy and chromosome mapping procedures and may be used to design expression vectors and secretion vectors. The proteins of the invention are discasted to treat discases including canner, autoimmune diseases, cardiovascular disorders, cystic fibrosis, bypothyroidism, immunological disorders, amyloidosis, brain disorders, skeletal muscle disorders, eye disorders, obesity, mitochondriocytopathies, diabetes, alherosclerosis, neurodegenerative disorders, garf rejection, Alzheimer's disease, consultative disorders, garf rejection, Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                   Polynucleotides and polypeptides encoding proteins with signal peptides, useful in diagnostic, forensic, gene therapy and chromosome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         100.0%; Score 83; DB 21; Length 249; 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Isolated human polynucleotides encoding polypeptides, useful for the treatment and diagnosis of e.g. cancer, ulcers and HIV infection -
                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                      49 Secreted proteins and the nucleic acids encoding them, useful in gene therapy and for detecting similar sequences in samples - \,
                                                                                                                                                                The present invention relates to 49 Secreted proteins and the CDNAS encoding them. The protein and nucleic acids may be used in the prevention, treatment and diagnosis of diseases associated with inappropriate protein expression
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  antianaphylactic; rheumatoid arthritis; septic shock; pancreatitis;

AAM25963. The proteins can have activities based on the tissues and cells they are expressed in, such as: antinflammatory; antinfbummatic; cells they are expressed in, such as: antinflammatory; antipheumatic; cells they are expressive; antibacterial; endocrine; cardiant; central mervous system; virucide; antianglede; antimutagen; cardiants; cardianes; dermatological; antialergic; antiastummatic; antidiabetic; cytostatic; neuroprotective; antidepressant; nootropic; antidiabetic; cytostatic; neuroprotective; antidepressant; nootropic; antidiabetic; cytostatic; neuroprotective; antidepressant; nootropic; antidiabetic; rytostatic; neuroprotective; antidepressant; nootropic; cardiant been can be used in gene therapy, antisense therapy and vaccine production, The proteins and polynucleotides are useful for screening for agonists or antagonists of a protein and for the treatment and diagnosis of disorders associated with the activity of a protein e.g. inflammation, rheumatoid arthritis, septic shock, panceatiis, cardiac dysfunction, infections, autoimmunity, genetic diseases, haematopoiett disorders, anaemia, platelet disorders, thrombocytopaenia, wounds, burns, ulcers, osteoporosis, asthma, diabetes, cancer, multiple sclerosis, depression, and allored and allored cardiactions and allor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human; immune; haematopoietic; immune/haematopoietic antigen; cancer;

Claim 11; SEQ ID NO 18041; 3071pp + Sequence Listing; English.

AAX54951 to AAK64702 encode the human immune/haematopoietic antigen (I) amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) proteins and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For example, they may be used to treat disorders associated with decreased that affect the activity of (I) by expression in a patient's genome that affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) polynucleotides may be used to produce the secreted (I), by inserting the nucleic acids into a host cell and culturing the cell to express the

```
protein. (I) proteins and polynucleotides may be used to prevent, diagnose and treat immune/haematopoietic related diseases, especially cancers and cancer metastases of haematopoietic-derived cells. AAK64703 to AAK87694 represent human immune/haematopoietic antigen genomic sequences from the present invention. AAK64942 to AAK54950 and AAM82169 represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       AAD08488-AAD08529 represent cDNAs corresponding to 18 human secreted protein genes, and AAE04199-AAE04239 represent the proteins they encode. AAE04240-AAE04297 represent human secreted protein fragments or variants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       foetal abnormality; developmental abnormality; haematopoietic disorder; immune system disorder; AIDS; autoimmune disease; rheunatoid arthritis; inflammation; allergy; neurological disorder; Alzheimer; asisease; parkinson's disease; cognitive disorder; schizophrenia; asthma; skin disorder; psordasis; sepeis; diaberes; etherosclerosis; cardiovasqular disorder; applogenic disorder; kidney disorder; endorder; pregnancy-related disorder; gene therapy; cell culture; chemoraxis; food additive; binding partner identification.

The secreted proteins and their genes are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene therapy. Pathological conditions can be diagnosed by determining the amount of the new protein in a sample or by determining the presence of mutations in the new genes. Specific uses are described for each of the 18 genes, based on the tissues in which they are most highly expressed, and include developing products for the diagnosis or treatment of proliferative disorders, cancer, tumours, foetal and developmental abnormalities, heamatopoletic disorders, diseases of the immune system, AIDS, autoimmune diseases (e.g., rheumatoid arthritis), inflammation, allergies, neurological disorders (e.g., Alzheimer's disease, Parkinson's disease), cognitive disorders, diabetes, atherosclerosis, skin disorders (e.g., psoriasis), sepsis, diabetes, atherosclerosis, cardiovascular disorders, angiogenic disorders, kidney disorders, endocrine disorders, and infections. The proteins can also be used to aid wound healing and epithelial cell proliferation, to prevent skin ageing due to subure of primary tissues, to regenerate tissues, to identify their cognate ligands or binding partners, and in chemotaxis, and can be used as a food additive or preservative to modify storage properties.

Antibodies specific for a protein of the invention can be used in the disorders mantioned above, and the disorders mantioned above, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      foctal abnormality; developmental abnormality; haematopoletic disorder; immune system disorder; AIDS; autoimmune disease; rheumatoid arthritis; inflammation; allergy, neurological disorder; Alzheimmer's disease; Parkinson's disease; cognitive disorder; schizophrenia; astima; skin disorder; psoriasis; sepsis; diabetes; atherosclerosis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          in diagnostic immunoassays e.g., radioimmunoassay or enzyme linked immunosorbent assay (ELISA). The present sequence represents a human secreted protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

AAD08488-AAD08529 represent CDNAs corresponding to 18 human secreted protein genes, and AAE04199-AAE04239 represent the proteins they encode. AAE04240-AAE0429 represent human secreted proteins and their genes are useful for preventing. The secreted proteins and their genes are useful for preventing. The secreted proteins and their genes are useful for preventing. The secreted proteins and their genes are useful for preventing. CC treating or ameliorating medical conditions can be diagnosed by determining the presence of mutations in the new protein in a sample or by determining the presence of mutations in the new protein in a sample or by determining the presence of mutations in the new genes. Specific uses are described for each of the mutations in the new genes. Specific uses are described for each of the mutations on the tissues in which they are most highly expressed, and include developing products for the diagnosis or treatment of abnormalities, haematopoietic disorders, disease of the immune system, and include developing products for the diagnosis or treatment of print of alsorders, disease, control mutation, alsorders, endicates, and information, sepsis, diabetes, atherosclerosis, string and estimated disorders, pregnancy-related disorders, endocrine disorders, and infections. The proteins can also be used to aid wound the disorders specific for a protein of the invention can be used in also as a food additive or preservative to modify storage properties.

Antibodies specific for a protein of the invention can be used in alleviating symptoms associated with the disorders mentioned above, and in diagnostic immunososays e.g., radioimmunossay or enzyme linked immunosasay e.g., radioimmunossay or enzyme linked immunosasay e.g., radioimmunosasay or enzyme in human axx
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps

The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence complementary to a polynucleotide which comprises a 3'-end sequence complementary to a polynucleotide comprises a 1'-end sequence of the combination of the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH03166 to AAH13628 and AAH3633 to AAH1842 represent human cDNA sequences; AAB92446 to AAH3639 represent human amino acid sequences; and AAH33629 to AAH13632 represent oligonucleotides, all of which are used in the exemplification
                                                                                                                                                                                                                                                                                                                                                                                                                                    Primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This sequence represents the protein encoded by the human SH3DIA CDNA clone 9 (see AAZ4574). SH3DIA contributes to the development of platelets and the pathogenesis of leukaemias, both in general and in particular those involving the megakaryocytic lineage. The cromosome 21. The protein includes SH3 domains and EH domains, chromosome 21. The protein includes SH3 domains and the latter chromosome 21. The protein includes SH3 domains and the latter with maintenance of the cytoskeleton. At least 3 isoforms of SH3DIA exist (see AAY32154-58). The invention provides methods for the diagnosis and treatment of megakaryocytic abnormality, che diagnosis and treatment of megakaryocytic abnormality. The invention providers in chromosome 21, low platelets in deletion for 21, association of chromosome 21, low platelets in deletion for 21, association of chromosome 21, low platelets in deletion for 21, association of chromosome 21, with leukaemias, neural abnormalities, dysfunctions and disorders in louding brain malformations and consistive dysfunctions, microcephaly, ilssencephaly, and colpocephaly Methods are also provided: for suppressing challs the provints of the provints of the corresponding cognitive dysfunctions are severally expressing challs the provints of the corresponding reasons are also provided: for suppressing challs the provints of the corresponding cognitive dysfunctions corresponding reasons and also provided: for suppressing challs are also provided: for suppressing challs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Nucleic acid from the human SH3D1A gene and its products, useful for the diagnosis and treatment of myeloproliferative disorders and

The invention relates to primers for synthesising full length cDNA clones. 830 cDNA molecules encoding a human protein have been should and nucleotide sequences of 5'- and 3'-ends of the cDNA molecules have been determined. Primers for synthesising the full length cDNA are useful for clarifying the function of the protein encoded by the cDNA. The full length clones were obtained by construction of full length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA asily without any special methods. The present sequence is a polypeptide encoded by a full length human cDNA of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in CD-ROM format directly from EPO.
                                                                                                                                                                                                                                                                                                                                                                                                                                                830 Primers useful for synthesizing full length cDNA clones and their

                                                                                                                                                                                                                                                                                                                                                                                                                                       Dis sequence represents the protein encoded by the numan shalled of platelets and the pathogenesis of leukaemias, both in general and in particular those involving the megakaryocytic lineage. The gene maps to the small candidate region for low platelets on chromosome 21. The protein includes SH3 domains and EH domains, both associated with protein includes SH3 domains and the latter with maintenance of the cytoskeleton. At least 3 isoforms of SH3DA exist (see AAY32154-58). The invention provides methods for myeloproliferative disorder, platelet disorder, acute leukaemia, neural disorders, thromobocytopenia, platelet disorder acute leukaemia, chromosome 21, low platelets in deletion for 21, association of gains in chromosome 21 with leukaemias, neural abnormalities,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             dysfunctions and disorders including brain malformations and corresponding cognitive dysfunctions, microcophaly, lissencephaly, methods are also provided: for suppressing cells unable to regulate themselves; screening for a somatic alteration in the SH3DIA gene; monitoring the progress and adequacy of a treatment; monitoring tunner risk progress or megakaryoctyic abnormality, myeloproliferative disorder, haematopoletic disorder, platelet disorder or leukaemia; and
                                                                                                                                                                                                                                                                                                                                                                                                                               This sequence represents the protein encoded by the human SH3DlA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 :

polypeptide (II) sequences. (I) is useful as hybridisation probes, and polymersae chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The useful for chromosome polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful in reacting disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations and portant contains and polynucleotide sequences have applications in the polynomial partners or other traits to assess biodiversity and processing of the contains and polynucleotide sequences have applications in the polynomial partners or other traits to assess biodiversity and processing of the contains and polynucleotide expensions or other traits to assess biodiversity and processing contains and polynucleotide activity.

New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess

Rosen CA, Barash SC, Ruben SM;

WPI; 2001-488781/53.

N-PSDB; AAI63825

New isolated nucleic acids and polypeptides, useful for diagnosing, treating and/or preventing human diseases and disorders  $^{\circ}$ 

Claim 11; SEQ ID NO 197; 664pp + Sequence Listing; English.

The invention relates to human polynucleotides (AA163803-AA164012) and the invention relates to human polynucleotides (AA163803-AA164012) and the encoded proteins (AAM34497-AAM3660) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes were isolated from a range of human tissues disclosed in the genes were isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)agonists or are useful in the diagnosis, treatment and prevention of: (a) cancer, c.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or uroganital; (b) immune discretes e.g. Addison's disabetes mellitus, c.c. conditis, (c) cardiovascular disorders such as myccardial ischaemias; c.c. collis, (c) cardiovascular disorders such as myccardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infectious diseases such as viral, bacterial, fungal and parasitic infections.

Con the sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from MIPO at ftp.Wipo.int/Pub/published\_pct\_sequences.
